

Santiago Hernández Toro

Systems Engineer · Full Stack Developer · JavaScript / React · Java · Python · Cybersecurity Enthusiast

Itagüí, Antioquia, Colombia | +57 302 469 6854 | santiagohtoro@outlook.com | linkedin.com/in/santiago-hernandez-toro | github.com/Santiagohtoro

Systems Engineer passionate about technology and innovation. Experienced in frontend development (React.js, HTML, CSS, JavaScript), version control, cloud technologies and agile methodologies. Knowledge of backend development with Java, Spring and SQL, and secure API design. Experienced in data handling and analysis, applying ETL processes, SQL, Python and Excel to transform and visualize information.

EXPERIENCE

Systems Engineer — ESE, Grupo Educación y Empresa

August 2024 — Present · Medellín

- Lead the design and implementation of scripts and applications for data normalization, using Python, SQL and ETL to systematize previously manual processes.
- Design analytical dashboards and reports in Power BI and Excel that support decision-making and business process optimization.
- Drive the adoption of new frontend and backend tools to improve operational efficiency and team collaboration.

Information Security Professional Intern — Tuya S.A.

February 2024 — August 2024 · Medellín

- Collaborated on access management and information security, focusing on user creation, role assignment and cleanup to ensure policy compliance.
- Contributed to operational improvement by automating access-management tasks, increasing efficiency and reducing the risk of manual errors.
- Took part in innovation initiatives and tool development that simplified information collection.

PROJECTS

AquaReport — Water treatment plant data management & analysis

Systems Engineering thesis project · React, Django, MySQL

- Led the Full Stack development of AquaReport, focused on managing and analyzing operational data for a drinking water treatment plant.
- Recognized as best thesis project by Universidad Católica Luis Amigó (June 2024), titled “Transformación Digital en la Industria del Tratamiento de Agua: El Rol Fundamental del Análisis de Datos”.
- Reduced human error in field data collection and automated report generation. Now actively used by the Empresa de Servicios Públicos de Valparaíso (Antioquia).

App ESE — Educational management & analytics platform

In production · Python, Django, MySQL

- Django application that automates the normalization of educational test results (Saber Pro, Saber TyT) and consolidation of historical results by university and student.
- Feeds Power BI analytics and reporting processes, with user, role and permission management.

Digital Booking — Cloud Specialist (team)

Digital House, MercadoLibre & Globant fellowship · AWS, React, Java

- Implemented the AWS cloud infrastructure for the Digital Booking project as cloud specialist.
- Supported development teams on frontend (React), backend (Java) and database management.

StrategicShipping (SAC PRO) — Frontend Developer (team)

Picking & packing management system · React

- Worked on the frontend of StrategicShipping, an end-to-end system for picking, packing and logistics inventory management.
- Helped optimize operational efficiency, including automated shipping-voucher generation.

TECHNICAL SKILLS

Frontend Development

React.js, JavaScript, HTML5, CSS3, Bootstrap

Backend Development

Java, Spring Framework, SQL, Python, Django

Cloud & Infrastructure

AWS, Git, GitHub, version control

Data & Analytics

Power BI, ETL, Excel, SQL

Information Security

Access management (IAM), security best practices

CERTIFICATIONS & ADDITIONAL TRAINING

- Introduction to Cybersecurity — CISCO Networking Academy
- Git Course — Código Facilito Platform
- Introduction to Data Science Course — Universidad Católica Luis Amigó

EDUCATION

B.S. in Systems Engineering

Universidad Católica Luis Amigó · 2019 — 2024

Thesis project: AquaReport, recognized as best thesis project.

Certified Tech Developer

Digital House (MercadoLibre & Globant fellowship) · 2021 — 2022
